

Part B

In this part of the test, there are six short extracts relating to the work of health professionals. For **questions 1-6**, choose answer (**A**, **B** or **C**) which you think fits best according to the text.

1. The policy document tells us that

- (A) stop dates aren't relevant in all circumstances.
- (B) anyone using EPMA can disregard the request for a stop date.
- (C) prescribers must know in advance of prescribing what the stop date should be.

Prescribing stop dates

Prescribers should write a review date or a stop date on the electronic prescribing system EPMA or the medicine chart for each antimicrobial agent prescribed. On the EPMA, there is a forced entry for stop dates on oral antimicrobials. There is not a forced stop date on EPMA for IV antimicrobial treatment – if the prescriber knows how long the course of IV should be, then the stop date can be filled in. If not known, then a review should be added to the additional information, e.g. 'review after 48 hrs'. If the prescriber decides treatment needs to continue beyond the stop date or course length indicated, then it is their responsibility to amend the chart. In critical care, it has been agreed that the routine use of review/stop dates on the charts is not always appropriate.
