

2. The guidelines inform us that personalised equipment for radiotherapy

- (A) is advisable for all patients.
- (B) improves precision during radiation.
- (C) needs to be tested at the first consultation.

**Guidelines: Radiotherapy Simulation Planning Appointment**

The initial appointment may also be referred to as the Simulation Appointment. During this appointment you will discuss your patient's medical history and treatment options, and agree on a radiotherapy treatment plan. The first step is usually to take a CT scan of the area requiring treatment. The patient will meet the radiation oncologist, their registrar and radiation therapists. A decision will be made regarding the best and most comfortable position for treatment, and this will be replicated daily for the duration of the treatment. Depending on the area of the body to be treated, personalised equipment such as a face mask may be used to stabilise the patient's position. This equipment helps keep the patient comfortable and still during the treatment and makes the treatment more accurate.
